TSCA – Certificate of Conformity

Products from Alumeco Group do not contain TSCA restricted substances.

What is TSCA
TSCA is short for The United States Toxic Substances Control Act and is a law to regulate the use of harmful chemicals.
It can be described as the US counterpart to the REACH regulation in the EU.
TSCA regulates the use of e.g. asbestos, lead (in paint), metallic mercury and a range of organic substances and solvents for products distributed in the US.

TSCA in relation to Alumeco products
As we sell basic metal products, we can safely say that our products do not contain TSCA restricted substances.

However, this declaration does not cover future surface treatments nor products where the client themselves specify TSCA restricted substances.

Please do not hesitate to contact us if you need any additional clarification regarding this TSCA declaration.

Best regards,

Thomas Andresen
Quality Engineer
